

The U.S. Military has been using the Super Chef for over 30 years!

Our stainless steel units look as good as they work, prompting many restaurants to use them.

The Super Chef is rugged enough to go out on the range!

The History of American Production

American Production Company, Inc was founded in 1941 in response to the war effort. It was originally located in Burlingame, California across the bay from the Kaiser shipyards in Richmond, California. To speed construction of the liberty ships during World War II, ways were sought to improve efficiency and maximize productivity. With thousands of workers spread across miles and miles of assembly lines an efficient, cost effective way was needed to feed the massive work crews in as short amount of time as possible. American Production was born in response to this need. Mobile catering trailers customized with insulated containers of hot food traveled down the production lines to the workers - offering them a hot meal, close at hand while minimizing their time away from their work station.

Why stainless steel?

Stainless steel does not harbor bacteria the way plastic does and leaves no aftertaste. Our units are easily cleaned and can be used for food or beverage without residual flavor transfer. Our no spill seal and heavy duty cam clamps secure lids tight for safer handling. Unlike vacuum insulation, our non-hygroscopic solid material insulation reinforces and strengthens the walls of the container. Our jugs are tough enough to survive the impact when dropped to victims during air/sea rescue operations. Super Chef containers meet or exceed Federal and Military specifications for thermal efficiency and durability. They are in compliance with U.S. Dept. of Health and NSF International standards for food service equipment.

American Production insulated stainless steel containers are in demand wherever prepared food and beverage must be transported to the serving area. These containers are in use by domestic and foreign military, school systems, correctional institutions and industrial food services throughout the United States and we are an approved OEM supplier to Lockheed for use as original equipment on C-130 aircraft.

AMERICAN PRODUCTION
Company, Inc. Since 1941

The last beverage/food container you will ever need.

The key to Super Chef's superior durability is its' triple wall construction—two layers of stainless steel bonded together by solid non-hygroscopic material insulation.

I would like to place an order for a new lid gasket for my MIL-5 container. As a point of interest, when I was serving in Iraq during "Desert Storm" your containers (we called them Silver Bullets) kept our beverages very cold, even in the 130 degree desert heat.

Jim Wade
Phoenix, AZ

"My family and I live on a very isolated property not far from the tip of Cape York Peninsula, Australia. Fishing and Beachcombing are our favorite pastimes... on a recent sortie up the coast we found a large stainless steel container in very good condition. However, the lid and the top are missing. Would it be possible to still procure these items..."

Rae

Several years ago I found a 10 gallon stainless steel beverage dispenser in a junk pile. I took it home, cleaned it up and "voila" the dispenser (although dented and scratched) didn't leak a drop. Who knows how long it had been laying out in the hot and cold Oklahoma elements.

My son and I belong to Boy Scout Troop 275 and we have used this dispenser on practically every campout for the past three years. We call it the "Big Urn."

This container is so well insulated, it will keep ice water from melting for two to three days; even in 100 degree heat!

Rich Fuller
Asst. Scoutmaster T-275
Choctaw-Nicoma Park, OK

I was driving my work truck up a steep hill and I didn't have my Super Chef water jug fastened well. Unfortunately, it fell off the truck and rolled down the hill what seemed to be a mile. I went back to retrieve what I thought would be the wreckage and was amazed to see that it sustained no damage. These things are well built!

A happy customer

Steve Edwards,
Lynchburg, VA

American Production Containers are used by:

- Restaurants
- Hotels
- Corporations
- Caterers
- Schools
- Boy Scout Troops
- Cruise ships
- Oil Rigs
- Prisons
- U.S. Army
- U.S. Navy
- U.S. Marines
- U.S. Air Force
- U.S. Coast Guard
- Canadian military
- Australian military
- Royal Air Force
- ... and many more!
